

Twist™

Twist uses gravity-fed passive technology to continuously replenish fragrance oil throughout its **60-day lifespan**, delivering consistent scent performance that aerosol and gel systems simply can't match.

Gravity-fed
technology

60-day
consistent
performance

Made in
USA

No batteries
or artificial power

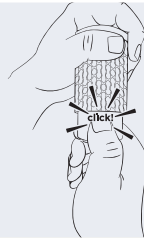

Step 1

Hold as shown and twist the bottom clockwise 1/4 turn.

Step 2

Turn until you hear and feel a click.

Step 3

Place the refill into the mounted dispenser, located in an area with active airflow.

Traditional passive air fresheners rely on surface evaporation, which means the fragrance fades as soon as the outer layer is depleted. Twist solves this with gravity-fed technology that continuously pulls fresh fragrance oil to the surface throughout its full 60-day lifespan. The result is a consistent, dependable scent experience that other passive systems simply can't match, with no batteries, no propellants, and nothing to maintain.

Less maintenance.
More consistent.
Built to last 60 days.
